## PROJECTS

### B.SC INFORMATION SYSTEM MANAGEMENT

#### 1. ONLINE BOOK SHOP

Hardware:intel core processor,2GB RAM

- Software:HTML,CSS,JAVASCRIPT
- An online bookstore software projects that acts as a central database containing various books in stock along with their title, author and cost. This project is a website that acts as a central book store. This web project is developed using as the front end and css as a back-end. The css database stores various book related details. A user visiting the website can see a wide range of books arranged in respective categories

#### 2. REACT PROJECT YUP VALIDATION FROM

Hardware:Intel core processor,8GB RAM

- Software: REACT.JS,CSS, FORMIK
- Developed a responsive online visual studio code using React JS for the frontend and Firebase for backend data storage. Implemented form validation using Yup and React Hook Form for secure user authentication and book management. The application allows users to register, browse, and purchase books online. Designed with a modern UI and mobile-friendly layout for an enhanced user experience.

## WORKSHOP

- In the retail book store industry, the first most common SOP is Inventory Management, which outlines procedures for tracking, ordering, and restocking books to ensure optimal inventory levels.
- The second SOP, Customer Service Protocols, is crucial in the retail bookstore industry as it provides comprehensive guidelines for engaging with customers, addressing inquiries, and resolving complaints
- An SOP turns best practices from suggestions into clear steps, making sure your team always works in the company's best interest. SOPs provide detailed instructions to guide your team, helping them achieve great results while saving resources.
